

SOLUTION BRIEF · 2026 · MUNICIPALITIES, PARKS & PUBLIC WORKS

Evidence and deterrence at borough scale

Town hall, yard, park, pump house — documentation a board can follow. Not a county-wide program.

The problem

Municipal sites are usually a main building, a yard, and something the public never sees until it breaks. Parks and pavilions get hit in season. Public works lots lose tools and copper. Consumer cameras do not give police a usable still.

Staff cannot drive between yards after every alarm. One operator should be able to look at several sites without a standing guard contract.

Typical sites

Town halls and clerk windows

Public works garages and salt yards

Parks, pavilions, and lots

Water and pump stations

Outbuildings that never got fiber

What we design for

Public-facing doors

Intercom at entries, viewer at the desk, cameras where visitors interact.
Records an elected board can understand.

Yards and outbuildings

Fleet parking and equipment storage — radios off the main building when line of sight allows.

Parks and remote corners

Power and a path. Cellular or satellite when there is nothing to extend from.
Pop-up events on the lawn use the same pattern as a mobile retail kit.

Paper a board can vote on

Drawings, part lists, and a fixed engagement fee — not an open-ended integrator retainer.

Start with a conversation

SOLUTION BRIEF · 2026 · MUNICIPALITIES, PARKS & PUBLIC WORKS

How the job runs

01 Conversation What has to work on day one.	02 Design Drawings and an orderable part list.	03 Review Walk the package before anyone buys.	04 Buy & install Your distributors. Your trades.	05 Finish line Full Support stays through commissioning.

Why it pays back

Vandalism

Documented coverage in parks and yards regularly produces long stretches without the seasonal repeat damage.

Evidence

Clear footage is what investigations actually use — not a blurry still from a doorbell camera.

Staff time

Remote view of several sites beats driving the loop after every alarm.

What you leave with

- Site drawings a public packet can include
- Orderable hardware list
- Multi-site viewing notes
- Install path via your facilities or an introduced crew

Buy the list. Install your way.

Order from the distributors you already use. Install with your facilities team, electrician, or preferred integrator. Full Support keeps us in the loop until the system works as designed.

Engagement fees are quoted after scope. See How We Work (orbitsecuritygroup.org/consulting/how-we-work) for 2026 design bands. Hardware cost is separate.
