

SOLUTION BRIEF · 2026 · SMALL BUSINESS & OFFICES

A real design for a small footprint

Storefronts, professional offices, and light industrial — not a shopping-cart camera kit.

The problem

Small does not mean simple. A boardwalk unit, a strip-mall shop, or one building with a lot out back still has a coverage problem and a power problem. Consumer kits die after dark or stop recording when the Wi-Fi hops.

Rekeying three doors twice a year is often more expensive than doing access once. After-hours break-ins are opportunistic — visible, working coverage changes the odds.

Typical sites

Professional and medical offices

Owner-operated shops

Light industrial bays

Single-building offices with a lot

Storefronts with a rear door

What we design for

Doors that stop costing money

Readers and locks on the openings that get rekeyed. Fail-safe vs fail-secure written per door — not a slogan.

A few honest cameras

Front, register or reception, rear door, lot if it exists. Analytics on local hardware — no per-camera rent.

One closet that can feed them

Switching and PoE sized for the schedule. VLANs so cameras are not on the guest SSID.

Install your way

Electrician, facilities, or an integrator you already trust. We stay on through commissioning if you choose Full Support.

Start with a conversation

SOLUTION BRIEF · 2026 · SMALL BUSINESS & OFFICES

How the job runs

01 Conversation What has to work on day one.	02 Design Drawings and an orderable part list.	03 Review Walk the package before anyone buys.	04 Buy & install Your distributors. Your trades.	05 Finish line Full Support stays through commissioning.

Why it pays back

Rekeying

One or two rekey cycles across several doors often covers the access hardware within a year or two.

After-hours

Visible cameras and remote alerts deter most opportunistic theft and give evidence when something does happen.

Simple scope, faster math

Fewer doors and cameras than a warehouse means lower system cost — breakeven arrives sooner when the design matches the site.

What you leave with

- Door schedule and camera schedule
- Orderable part numbers
- IDF / PoE notes
- A path to install without a dealer lock-in

Buy the list. Install your way.

Order from the distributors you already use. Install with your facilities team, electrician, or preferred integrator. Full Support keeps us in the loop until the system works as designed.

Engagement fees are quoted after scope. See How We Work (orbitsecuritygroup.org/consulting/how-we-work) for 2026 design bands. Hardware cost is separate.
